flare

Ignite Community

ELECTRIC ROSE

Basic brand guide

Colour, typography, approved interface direction and the essentials that make Flare recognisable.

A distinctive spark. A calm interface.

People, verified organizers, and events remain the focus. Keep the brand expressive without overpowering event artwork.

DESIGN DIRECTION / VERSION 1.0

The Flare identity

Keep the original eight-ray spark shape. Replace the old rounded wordmark with a contemporary, confident treatment.

PRIMARY LOCKUP

Spark + lowercase wordmark + Ignite Community. Use for brand introductions, marketing, and prominent empty states.

LIGHT / DIGITAL

DARK / DIGITAL

Use the spark independently for favicon, app icon and avatars. Do not stretch, rotate for decoration, or add multicolour effects by default.

Electric Rose

Flare uses cool neutrals for information and two accessible pink accents for interaction across light and dark interfaces.

HEROUI V3 SEMANTIC MAPPING

background / foreground - surface / surface-secondary - muted - accent / accent-foreground - separator / border - overlay

Prefer semantic classes and component states over hardcoded colours. Pink belongs to primary actions, active states and occasional editorial emphasis. Neutral iconography, subtle dividers and clear focus rings keep the interface calm.

Type, space & feel

Keep the typography sharper than the original logo. Flare should feel contemporary, editorial and easy to scan.

Plus Jakarta Sans

Upcoming events in Toronto

Community Pride Night

Friday, November 13 · 8:00 PM · Toronto

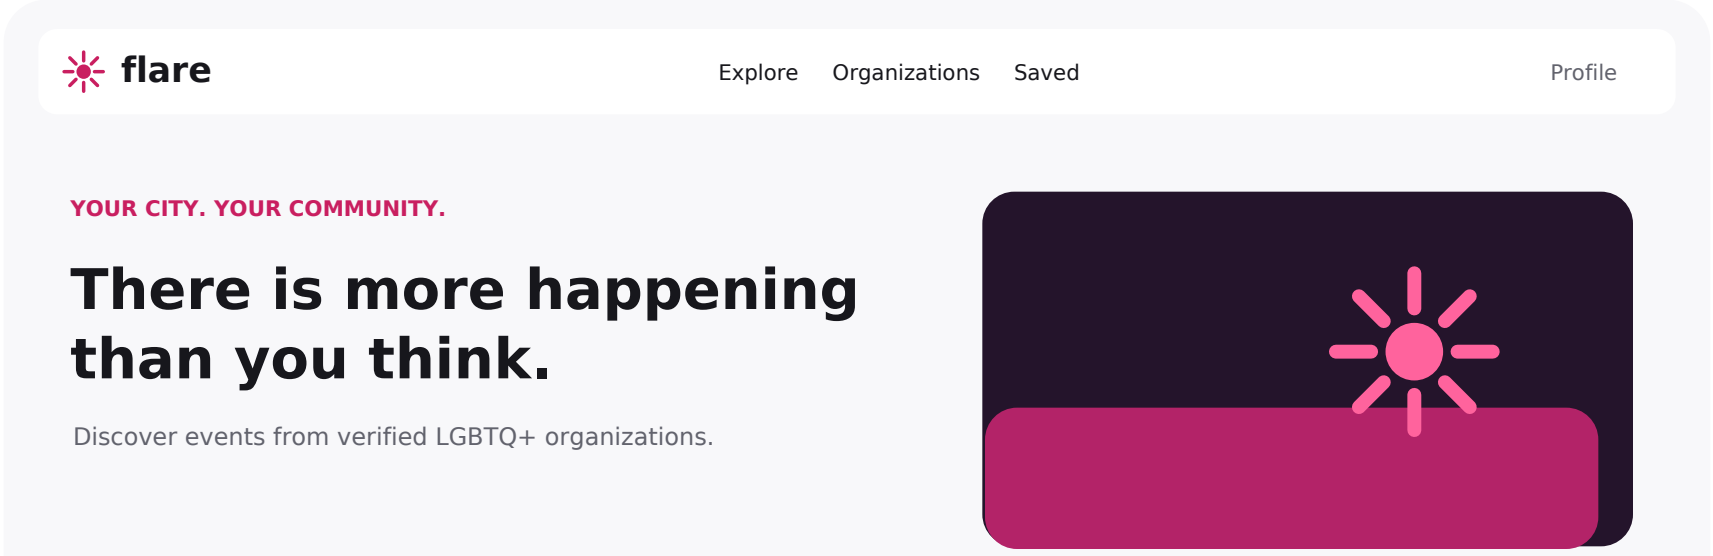

Design language

4px spacing rhythm | 12-16px cards | 16-20px desktop modal radius | restrained shadows | generous touch targets

Typography shown here uses a local substitute for visual layout; production should load Geist and Plus Jakarta Sans from their licensed sources.

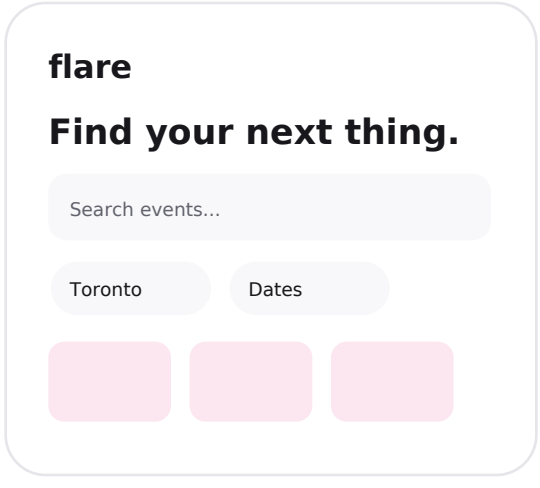

Split discovery page

A welcoming editorial introduction followed immediately by accessible search, filters and information-rich event cards.

DESKTOP

Two-column hero; results begin early. Search and location remain prominent, categories are quick chips, and practical filters expand on demand.

MOBILE

Compact introduction, immediate search, horizontal filter chips, single-column event cards and clearly labeled actions. No oversized hero that hides the listings.

Contrast event details

An intercepted-route modal on desktop and a full-screen experience on mobile. A compact poster supports, never dictates, the layout.

About Good to know Organizer

A welcoming evening of music and community...

Get tickets

APPROVED INFORMATION HIERARCHY

Title and short intro; small optional poster; one prominent date block; verified organizer; subtle dividers; About / Good to know / Organizer tabs; one price display in the sticky ticket footer.

NO POSTER

Community Pride Night.

Image-free state

Keep the contrast header as the hero. Do not show an empty image frame, stock photography or a broken placeholder.

In compact cards, use a branded date tile. With a poster, show a small uncropped thumbnail and let users expand the original.

What stays consistent

This is a deliberately basic guide: approved visual direction, not a finalized design system or product architecture.

- **Logo**

  Eight-ray spark and lowercase flare wordmark; Ignite Community is the approved subtext.

- **Colour**

  Electric Rose accents over quiet light and dark neutral surfaces. HeroUI semantic tokens drive components.

- **Typography**

  Geist for UI and Plus Jakarta Sans for major headings; avoid novelty rounded fonts.

- **Cards**

  Editorial on discovery, practical where browsing is dense, compact for saved/search lists.

- **Event details**

  Contrast header, small optional poster, date and organizer, tabs, single sticky ticket CTA.

- **Missing artwork**

  Use a designed branded fallback; never require an image to make an event look complete.

- **Responsive**

  Desktop and mobile can have different compositions while sharing content and data.
